

## give me inheritance 3 simple java progrms

Here are 3 very simple Java programs that show inheritance.

### 1) Single inheritance (basic)

```
class Animal {  
    void eat() {  
        System.out.println("Animal is eating");  
    }  
}  
  
class Dog extends Animal { // Dog inherits from Animal  
    void bark() {  
        System.out.println("Dog is barking");  
    }  
}  
  
public class Test1 {  
    public static void main(String[] args) {  
        Dog d = new Dog();  
        d.eat(); // inherited method  
        d.bark(); // own method  
    }  
}
```

### 2) Multilevel inheritance

```
class Animal {  
    void eat() {  
        System.out.println("Animal is eating");  
    }  
}  
  
class Dog extends Animal { // Dog inherits Animal  
    void bark() {  
        System.out.println("Dog is barking");  
    }  
}  
  
class BabyDog extends Dog { // BabyDog inherits Dog  
    void weep() {  
        System.out.println("BabyDog is weeping");  
    }  
}
```

```

public class Test2 {
    public static void main(String[] args) {
        BabyDog bd = new BabyDog();
        bd.eat(); // from Animal
        bd.bark(); // from Dog
        bd.weep(); // from BabyDog
    }
}

```

### 3) Method overriding with inheritance

```

class Animal {
    void sound() {
        System.out.println("Some generic animal sound");
    }
}

class Cat extends Animal { // Cat inherits Animal
    @Override
    void sound() { // overriding method
        System.out.println("Cat meows");
    }
}

public class Test3 {
    public static void main(String[] args) {
        Animal a1 = new Animal();
        Animal a2 = new Cat(); // upcasting

        a1.sound(); // calls Animal's sound
        a2.sound(); // calls Cat's sound (overridden)
    }
}

```

If you say which level you are (school/college), example outputs or variations (like hierarchical inheritance) can be added.
